State, Medicaid & CURES

Service Offered

Level I: Outpatient Treatment (Adolescent & Adult)

Definitions of Funds/Grants

State Funds: Money that is provided by the Alabama Department of Mental Health.

Medicaid: Money that is provided by the Alabama Department of Mental Health for Medicaid recipients only.

CURES: A federally funded grant for opioid use disorders only.

Block Grant: Money that is provided by a federal grant through the Alabama Department of Mental Health.

Levels of Care Defined

Excerpts Taken from the ASAM PPC-2R (ASAM Patient Placement Criteria for the Treatment of Substance-Related Disorders)

Level 0.5 – Early Intervention

Early intervention services are designed to explore and address problems or risk factors that appear to be related to substance use and addictive behavior, and to help the individual recognize the harmful consequences of high-risk substance use and/or addictive behavior. Where Level 0.5 is delivered as an impaired driving program (DUI, DWI, OMVI), the length of service may be mandated and determined by program and regulatory rules. Completion of the program may be a prerequisite to reinstatement of driving privileges.

Early Intervention also encompasses services offered to persons in non-specialty settings, i.e. hospital emergency departments or primary care medical clinics. In these settings, the presentation may be substance use that is beginning to cause some harmful effects and/or high-risk use. Level 0.5 services in such settings take the form of Screening, Brief Intervention, and Referral to Treatment (SBIRT). SBIRT attempts to intervene early with non-addicted people, and to identify those who do have a substance use or addictive disorder and need linking to formal treatment. **Length will vary from as little as 15-60 minutes in SBIRT to several weeks as in impaired driving programs.**

Level I – Outpatient

In Level I services, addiction, mental health treatment, or general health care personnel, including addiction-credentialed physicians, provide professionally directed screening, evaluation, treatment, and ongoing recovery and disease management services. Such services are provided in regularly scheduled sessions of (usually) **fewer than nine contact hours a week for adults and fewer than six hours for adolescents**. The services follow a defined set of policies and procedures or clinical protocols. **The duration of treatment varies with the severity of the individual's illness and his/her response to treatment.**

Level II.1 – Intensive Outpatient

Intensive outpatient programs (IOPs) generally provide **9-19 hours** of structured programming per week for **adults** and **6-19 hours** for **adolescents**, consisting primarily of counseling and education about addiction-related and mental health problems. Intensive outpatient treatment differs from partial hospitalization (Level II.5) programs in the intensity of clinical services that are directly available. Specifically, most intensive outpatient programs have less capacity to effectively treat patients who have substantial unstable medical and psychiatric problems than do partial hospitalization programs.

Level II.5 - Partial Hospitalization Treatment

Partial hospitalization programs generally feature **20 or more hours of clinically intensive programming per week** as specified in the patient's treatment plan. Level II.5 partial hospitalization programs typically have direct access to psychiatric, medical and laboratory services, and **thus are better than Level II.1 programs (Intensive Outpatient)** to meet needs that warrant daily monitoring or management but which can be appropriately addressed in a structured outpatient setting.

****LEVELS III.1 – III.7-D NOTE:** While the duration of treatment varies with the severity of an individual's illness and his/her response to treatment, **the length of service in clinically managed Level III programs (Levels III.1, III.3, & III.5) tends to be longer than in the more intensive medically monitored and medically managed levels of care (Levels III.7 & III.7-D).**

Level III.1 - Clinically Managed Low Intensity Residential Treatment

Level III.1 programs **offer at least 5 hours per week** of low intensity treatment and substance-related disorders (or as specified by state licensure requirements). Treatment is directed toward applying recovery skills, preventing relapse, improving emotional functioning, promoting personal responsibility and reintegrating the individual into the worlds of work, education and family life. The services provided may include individual, group and family therapy; medication management and medication education. Mutual/self-help meetings usually are available on-site. **The length of stay in a clinically managed Level III.1 program tends to be longer than in the more intensive residential levels of care.** Longer exposure to monitoring, supervision, and low-intensity treatment interventions is necessary for patients to practice basic living skills and to master the application of coping and recovery skills.

Level III.3 - Clinically Managed Medium Intensity Residential Treatment

Frequently referred to as **extended or long-term care**, Level III.3 programs provide a structured recovery environment in combination with medium intensity clinical services to support recovery from substance-related disorders. When assessment indicates that such an individual no longer is cognitively impaired, he or she can be transferred to a more intensive level of care (such as a Level III.5) or a less intensive level of care (such as a Level I, II or III.1), based on a reassessment of his/her severity of illness and rehabilitative needs. **(Transfer to a Level III.7 or higher program would not be considered except in the presence of medical or psychiatric problems that require medical and nursing care.)**

Level III.3 programs generally are considered to deliver medium intensity services. Such services may be provided in a deliberately repetitive fashion to address the special needs of individuals for whom a Level III.3 program is considered medically necessary. **Such individuals often are elderly, cognitively impaired or developmentally delayed, or are those in whom the chronicity and intensity of the primary disease process requires a program that allows sufficient time to integrate the lesson and experience of treatment into their daily lives.** Typically, **they need a slower pace of treatment** because of mental health problems or reduced cognitive functioning or because of the chronicity of their illness. They may be homeless, although homelessness is not, in itself, a sufficient indication for admission to a Level III.3 program.

Level III.5 - Clinically Managed High Intensity Residential Treatment

Level III.5 programs are designed to treat persons who have significant social and psychological problems. The goals of treatment are to promote abstinence from substance use and antisocial behavior and to effect a global change in participants' lifestyles, attitudes and values. This philosophy views substance-related problems as disorders of the whole person that are reflected in problems with conduct, attitudes, moods, values, and emotional management. **Individuals who are appropriately placed in a Level III.5 program typically have multiple deficits**, which may include substance-related disorders, criminal activity, psychological problems, impaired functioning and disaffiliation from mainstream values.

Residents may present with the sequelae of physical, sexual or emotional trauma. Chronic use of psychoactive substances also may have impaired their judgment, at least temporarily, leaving them vulnerable to relapse, continued problems or continued use outside of a structured environment. Treatment is accomplished by providing specialty modalities and skills training while the resident is in a safe and structured environment, thus providing an opportunity for continued improvement. **Because treatment plans are individualized, fixed lengths of stay are inappropriate. Residents also may be transferred to a Level III.5 program from a less intensive level of care.**

The duration of treatment always depends on an individual's progress. **Nevertheless, the length of service in a clinically managed Level III.5 program tends to be longer than in the more intensive medically monitored and medically managed levels of care.** (Because of the longer duration of treatment in Level III programs, the essential nature of the residential component and the fact that clinically managed programs serve as a temporary recovery environment, **participants in Level III.5 are referred to as "resident"**.) A Level III.5 program may represent a "step down" for residents of a Level III.7 program without the intensive medical and nursing component. **A number of Level III.5 programs offer a full range of medical services.**

Level III.7 - Medically Monitored Intensive Inpatient Treatment

Level III.7 programs provide a planned regimen of 24-hour professionally directed evaluation, observation, medical monitoring, and addiction treatment in an inpatient setting. They feature **permanent facilities**, including inpatient beds, and function under a defined set of policies, procedures and clinical protocols. They are appropriate for patients whose subacute biomedical and emotional, behavioral or cognitive problems are so severe that they require inpatient treatment, but who do not need the full resources of an acute care general hospital or a medically managed inpatient treatment program.

The care provided in Level III.7 programs is delivered by an interdisciplinary staff of appropriately credentialed treatment professionals, including addiction-credentialed physicians. Treatment is specific to substance-related disorders, but the skills of the interdisciplinary team and the availability of support services **also can accommodate detoxification** and/or intensive inpatient treatment of addiction and/or conjoint treatment of co-occurring subacute biomedical and/or emotional, behavioral or cognitive conditions.

Level III.7-D - Medically Monitored Inpatient Detoxification

Level III.7-D is an organized service delivered by medical and nursing professionals, which provides for **24-hour** medically supervised evaluation and withdrawal management in a **permanent facility with inpatient beds**. This level provides care to patients whose withdrawal signs and symptoms are sufficiently severe to require 24-hour inpatient care. Twenty-four hour observation, monitoring and treatment are available. However, the full resources of an acute care general hospital or a medically managed intensive inpatient treatment program are not necessary.

Level I-D - Ambulatory Detoxification w/o Extended On-Site Monitoring

Level I-D detoxification is an organized **outpatient service**, which may be delivered in an office setting, health care or addiction treatment facility, or in a patient's home by trained clinicians who provide medically supervised evaluation, detoxification and referral services according to a predetermined schedule. **Such services are provided in regularly scheduled sessions.** Outpatient detoxification services should be designed to treat the patient's level of clinical severity and to achieve safe and comfortable withdrawal from mood-altering drugs (including alcohol) and to effectively facilitate the patient's transition into ongoing treatment and recovery.
